3 Conclusion and Recommendations 4

1 Company Overview

CellaVision offers scalable solutions that redefine and transform the process of performing blood differentials for labs of all sizes. Products:

- Analyzers: analyzing blood samples.
- Software: Image based software for blood smears. Works with own analyzers or other oems.
- Reagents: Reagents for analysing blood samples. Works with own analyzers or other oems.

2 Financial Performance Analysis

2.1 Positive Highlights

- Lower cogs.
- Profit and margins are flat.

2.2 Negative Aspects and Concerns

- Low digit increase in revenue, more or less flat growth. YoY.
- Insiders not buying.
- Low insider ownership.
- Original owner been selling since couple of years back. (still owns 6%)

2.3 Management's Commentary and Outlook

- CEO, have a positive outlook. Not sure, mostly bullshit in hes letter.

2.4 Key Financial Metrics (Historic average)

- Gross margin = 69.1% (70%)
- Ebit margin = 22.5 % (27%)

- Profit margin = 17.8 % (20%)
- ROIC = 19.2 % (20%)
- ROE = 17.8 % (18%)
- FCF-margin = 13.7 % (15%)

2.4.1 Revenue Growth

Growth is low single digit.

2.4.2 Profitability

EPS = 1.31 (estimate for 2025 6.35, upwards trend)

2.4.3 Valuation

- P/E = 24.9 (Historically low),
- P/S = 5 (Historically low)
- EV/EBIT = 18.3 (Historically low)
- EV/S = 4.9 (Historically low)

2.5 Our Club's Commentary and Investment Thesis

Strong profitability in business. Golden trio roic, fcf-margin, profit-margin = 15%. Valuation is on all time low but still quite high. Although one can argue that the valuation is not that high for a software company however, a big part of the revenue is hardware. Growth is stagnating. why is that? If growth can return the case is a solid turnaround.

- Future prospects: bone marrow application early 2026. Upgraded software version for hematology analyzers has come to completion.
- Reason to buy: I would not buy a big chunk but I think it can be a good entry point to buy some over a period of time and see how next quarter turns out. Profitability seems good, company has cash and solid financials. Valuation is historically low but its been very high consistently. Will multiple contraction continue? profits seems stable, growth is declining (low single digit growth).

3 Conclusion and Recommendations

Buy some, increase gradually
